

Wellis®

Quality | Innovation | Design

MADE IN EU

Introduction

WELLIS spas and hydro massage bathtubs combine the latest technical innovations with exceptional style.

Our experts draw upon the experience of ancient Eastern massage culture, coupled with the science of modern hydro therapy.

Our specially designed adjustable warm water jets direct deep tissue hydro-massage to specific points of the body's muscle-skeletal system.

Enjoying a WELLIS spa on a daily basis will bring many therapeutic benefits that include; promoting rapid healing of stressed or damaged muscles, relieving back and spine pain, and enjoying a deep and restful nights sleep, to name just a few.

Simply relax and enjoy the advantages of a WELLIS massage spa.

Since their establishment in 2003, WELLIS products have found steadily increasing popularity throughout Europe as more people change to a healthier lifestyle and demand high quality personal wellness equipment in their homes and gardens.

You may be surprised to learn that the renowned WELLIS range of “whirlpool” baths and garden Spas are produced in Hungary, Europe. From early beginnings as a straightforward import/export business, WELLIS has quickly realised the increasing consumer demand for high quality products, not always available from current suppliers.

WELLIS have recently undertaken a multi-million euro investment to complete the construction of a green field high technology manufacturing facility near Budapest in Hungary. With co-operation from their European partners WELLIS have designed and implemented a 7,000 sq m production unit that includes several lines incorporating ABB robots.

This new facility gives WELLIS the freedom to design and develop cutting edge technologies and produce ecologically sound and extremely high quality home wellness products. The facility opened in 2010 and is already producing their unique massage baths as well as a brand new range of garden Spas.

Each day we continue to work hard to firmly establish WELLIS as a leading European manufacturer. As we continue to grow we never lose sight that our success is built on the goodwill of our customers.

We are able to produce unique spas and whirlpool baths according to the local conditions. Let us know your requirements and our experts will find the best solution for you!

We are proud to present WELLIS and Hungary to an international market. We want to thank all the people internationally for choosing WELLIS products, and we hope that we can soon be part of your everyday life too!

Lucite® with Microban®

Lucite® Sanitary Ware was the first acrylic sheet to incorporate Microban® antibacterial protection during the casting process, ensuring that this performance feature runs right through the product. Lucite® with Microban® is safe and effective in reducing the growth of bacteria, exists for the lifetime of the bathtub and cannot be cleaned away. The antibacterial protection comes in addition to the other excellent performance characteristics of Lucite® cast acrylic.

Automated manufacturing incorporating ABB Robots has increased our efficiency and allows us to pre-plan and automate every tiny detail of the production process. This guarantees absolute consistency and quality control of each finished Spa as well as reducing our production costs – a saving that we pass on to our customers.

This pioneering system has transformed the way spas are made and has established WELLIS as an outstanding regional and international manufacturing company.

We have developed what has traditionally been an industry dominated by manual production using hand held tools to another level - producing products built with manufacturing tolerances of less than one tenth of a millimetre. Automation has led to other innovations in design as well.

Some benefits of Polyurethane reinforced spa body

Highly effective sound insulation, probably the quietest massage baths and Spas available – Take a bath or a spa whenever it pleases you and it won't annoy the neighbours!

Highly effective heat insulation – which means a longer time relaxing in the bath without having to top it up with hot water, and reduced electricity costs for your garden spa.

Ecologically sound product, easily degradable, (unlike fibreglass it does not give off any hazardous styrol gas). Thus it is not classes as hazardous and meets all relevant EU standards.

PU foam reinforcement in several layers
6,3 mm thick acrylic layer

Everyday luxury in your home

.....

In our stressed out lives, moments of tranquility are precious indeed. Time out from the pressures of our hurry, worry world, timeless moments with family or friends or just being there alone with just your body and soul for company...

Gentle soothing water provides the perfect world for relaxing and well-being.
Create a relaxing space in your busy life and join our many thousands of customers the world over enjoying their very own WELLIS oasis at home.

.....

2 years guarantee for the equipment

There is a 2 year guarantee for the WELLIS spas starting from the date of the original purchase, covering the electrical equipment and plumbing.

Enter the future of hydrotherapy

Colour therapy mood lighting

Colours can evoke many beneficial sensations in us - which have a significant positive impact on our physical wellbeing.

The rainbow of colours in the natural spectrum each have a different influence, a fact that was recognized by the ancient Egyptians.

More recently much scientific research has been carried out to identify particular beneficial effects of each part of the colour spectrum.

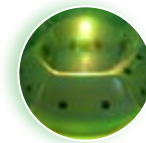

The application of this knowledge is now known as Chromotherapy and is widely used for helping with relaxation, de-stressing and mood enhancement.

In our Spas we call this mood lighting. Our exclusive system is based upon lights of four different colours: green, yellow, blue and red. These can be set to fade gently through the spectrum or, by a simple touch of the spa's control panel can be fixed on the single colour most beneficial to your mood.

The basic colours to be found in WELLIS® devices exercise a beneficial effect in the following cases:

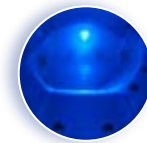

state of depression
stress, rheumatism
fever
constipation
asthmatic problems

chronic insomnia
heart problems,
upset mental state
skin irritations
high blood pressure

digestion problems
weariness, depression
diabetes
flu, colds
chronic depression

relief of menstrual cramps
function of throat and glands
heart rhythm, pulse
headache, toothache

Standard features: underwater lighting with 55 colour LED's

Exclusive multipoint colour therapy lighting

The exclusive WELLIS on-demand colour therapy moodlighting, includes between 12 and 20 water line led point lights within the bathing area.

Aromatic therapy

Aromatic therapy fragrances and volatile oils are used for pampering the soul and body.

Fragrances affect the limbic system, i.e. our emotional world thus they can be used for treating psychological problems as well. The main purpose of aromatic therapy is to purify and revive the body and soul.

The elements of this therapy include inhalation, as well as bathing and massage combined with aromatic therapy. You can enjoy the joint effects of the above treatments in your WELLIS spa, adding the power of your favorite fragrances to the hydrotherapeutic experience, which is sure to result in a better mood – Your holiday at home.

You deserve it...

FRAGRANCES

- CITRUS SORBET
- SANDALWOOD
- SUMMER ORCHARD

Seats and ergonomics

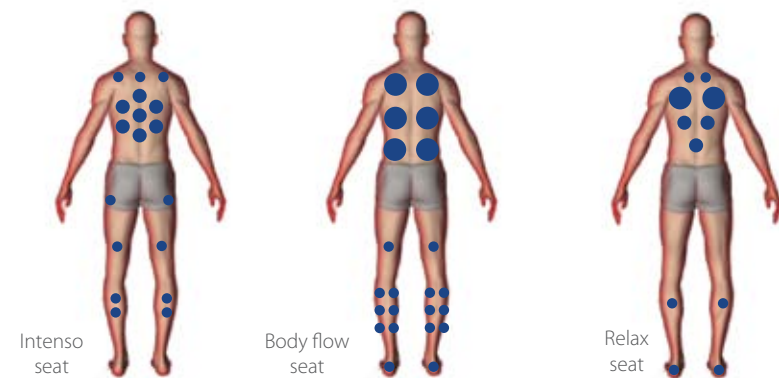

Our spas are designed, not just to look beautiful, but also to exceed all the norms for high quality hydro massage and ergonomics.

We work with office seating experts and therapists from several fields to arrive at the optimal shape for our spa seats. Next we vary that shape, station by station to accommodate the differing physical sizes of our customers and their families.

We carefully set the jet positions and performance characteristics to suit the particular target muscle group.

The result is a range of hydrotherapy stations that fit a wide range of physiques, provide highly effective hydromassage to all the right places, and are exceptionally pleasant and comfortable places to sit or lay.

And of course they all look beautiful too!

Wellis jets

WELLIS massage jets are designed to provide an optimal hydro massage experience.

The new 3 phases **TornadoJET™** provides an individually customized size of the massage surface.

The only thing you have to do is to set the radius of the waterflow by each jet.

Intenso seat

The most invigorating massage spot. Professional athletes, sport fans and anyone looking for intense hydro massage will enjoy the experience provided by our Intenso seat.

Body flow seat

This ergonomically designed therapeutic massage lounge provides luxurious comfort, whilst its carefully placed jets provide a superior massage experience for the entire body.

Relax seat

The numerous jets of this extraordinary body massage seat are carefully positioned to massage your neck, shoulders, calves and feet.

Range of shell and cabinet colours

Spa shell colours

We have carefully selected four beautiful contemporary shades for our spas that will harmonise with any setting – indoor or out.

Weatherproof composite cabinet

No more sanding, oiling and messy maintenance of a traditional timber cabinet.

Our spa cabinets are made from a wood/polymer composite material that looks as good as real wood but is entirely maintenance free.

The contemporary colours suit both interior and garden settings.

Computer control

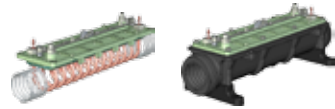

New for 2012 – we include a newly developed US made touch pad system. This high quality panel allows easy fingertip control to optimise your spa experience.

The “Easy Touch II” control pad is simple to use and provides quick adjustment of all spa functions including temperature, pumps, lighting etc.

The computer controlled system is self-calibrating, whilst the software is designed to be self-diagnostic, so it will display any abnormal situations on the large touch pad screen for your total peace of mind.

COLOSSUS CONTROL - Transforming the control spa system

- Unparalleled system reliability
- Friendly user interface
- Manufacturing flexibility & easy configuration
- Hi-tech material will prevent corrosion; chemical resistant heater
- Allows addition of auxiliary panels & the O-flow™ Remote

- High-tech, high-temperature resistant housing material.
- Proven use in mission critical applications for automotive & other industries.
- Employs a GFCI trip feature that cuts power in the event that a pump is stuck in the ON position

- Chemical resistant heater element & sensors
- Low-watt density efficient coiled element
- Patented heater design eliminates “rattle”
- Corrosion resistant, chemical-resistant heat housing
- Titanium element option

Water filtration, ozone generator

WELLIS multi-level filtering and water cleaning system is designed to provide exceptionally high quality crystal clear spa water.

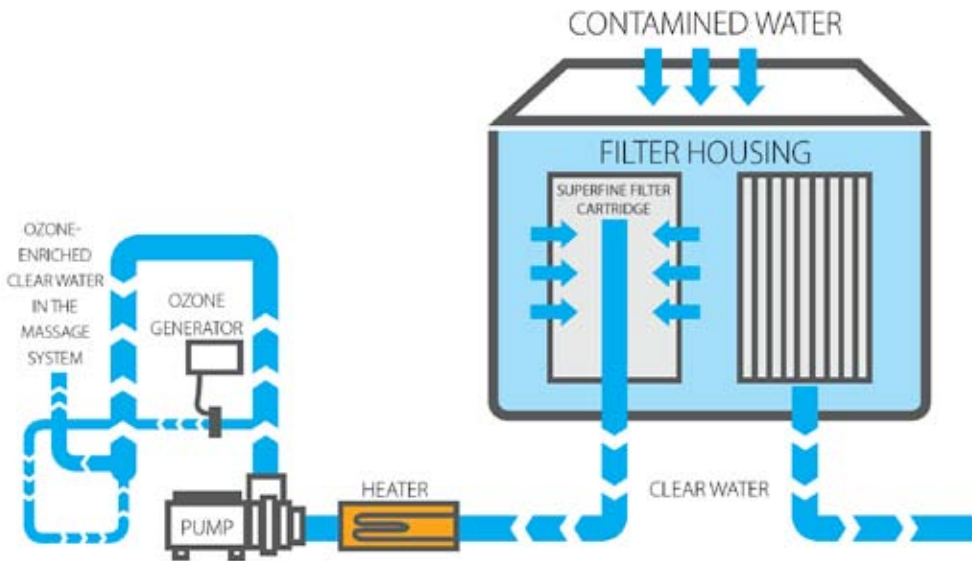

Our multi-level filtering and water cleaning system was designed to provide clear, safe spa water, free of all contaminants.

While you relax, body oils and other contaminants are removed by large capacity cartridge filters that ensure 100% filtration of the water many times each day.

For simple system maintenance filters can be easily taken out and replaced.

Our spa water filter uses a Microban filter media to prevent microbial growth.

Sanitization with ozone

Ozone is a natural gas found in the atmosphere and simply consists of 3 oxygen atoms. Our Wellzone® technology injects ozone into the plumbing system where it is pre-mixed with circulating water, this neutralizes any bacteria, viruses and other contaminants. The ozone then rapidly degrades into normal oxygen.

Advantages:

- Reduces the need for caustic chemical sanitizers by 60-90%
- Only by-product is oxygen
- Highly effective sanitizer – kills up to 99% of dangerous germs, bacteria and viruses
- Eliminates oils, lotions and other contaminants resulting in crystal clear water.
- 100% natural and biodegradable

Excellent triple insulation

3 cm thick styrofoam insulation with thermal mirror foil on the cabinet and in the spa's tray.

Effective insulation is extremely important for hot tubs in order to reduce running costs to a minimum. The triple "Reflective Thermal Barrier" (RTB) insulation of WELLIS spas utilizes thermal gains from the spa's equipment, collecting any waste heat energy and reflecting it back into the plumbing and shell, whilst keeping out the colder outer air. We've even built our RTB system into our Thermal Spa covers which also have a special reflective foil coating beneath them to bounce rising heat back into the spa water.

This integrated energy management system means WELLIS Spas are exceptionally economical to own. Many spa manufacturers still use discredited spray foam insulation whilst, a few still mount the spa equipment, actually outside the spa cabinet, beneath the steps. These old legacy systems are both outdated as well as expensive to run and damaging to our environment.

The spa heatmap picture here is an infrared image of a Wellis spa which shows the efficiency of the RTB system. The person's face is red, indicating a high heat loss, whilst the pastel green and blues of the Wellis spa indicate a very low heat loss as almost all the heat is kept inside the spa and cabinet.

Wellis spa heatmap

LAING circulation pump

The LAING circulation pump is a very low power consumption (110W/h) device which is available for the most of our hot tubs as standard.

The low power consumption (40% lower energy costs than a typical circulation pump) long-life and almost silent running make this a very "green" and cost effective option to consider.

Hot air blower

A hot-air bubble bath has extra comfort compared to standard air blower. The warm air bubbles gently massage the skin, combined with nice bubble effect. A hot-air bubble bath's other great advantage is that slows the cooling of water.

Long life, durability

Reinforced molded ABS floor pan

The insulated one piece molded floor pan forms the foundation upon which we build our spas. The pan sides extend upwards and form a, moisture and insect proof barrier to protect the spas structure from the detrimental effects of damp ground.

Our reflective barrier insulation system extends across the floorpan to prevent valuable waste heat being drawn through the base by the "cold sink effect" that is created by damp ground.

Shell Supports

Even weight distribution is important to prevent stress damage as the spa ages. We ensure longevity of our spas by using non-organic pillars beneath the seat areas as part of an integrated support system that cannot deteriorate over time.

Weatherproof composite cabinet

We offer a choice of beautiful composite cabinets. The finish looks just like furniture grade timber but is entirely maintenance free and will hold its luster for years.

WPC cabinet frame

Immortality for the spa cabinet's frame! The special mixture of hardwood and plastic ensures exceptional stability and life for the Spa's structural frame – protecting and extending the life of your investment even further.

The I.S.I.S. system

There is nothing more restful than the soothing environment of a WELLIS spa. Especially if it is equipped with the most sophisticated, automatic spa water sanitation device.

Our I.S.I.S. system generates a constant stream of natural pure Bromine ions from a once yearly dose of Sodium Bromide (similar to Sea Salt) and also provides a wonderfully soothing water quality. It can never run out of sanitizer because it constantly recycles, and keeps the spa water crystal clear and safe for a full year between water changes.

With no need to add any chemicals you spend less time playing chemist with your water – more time enjoying your spa.

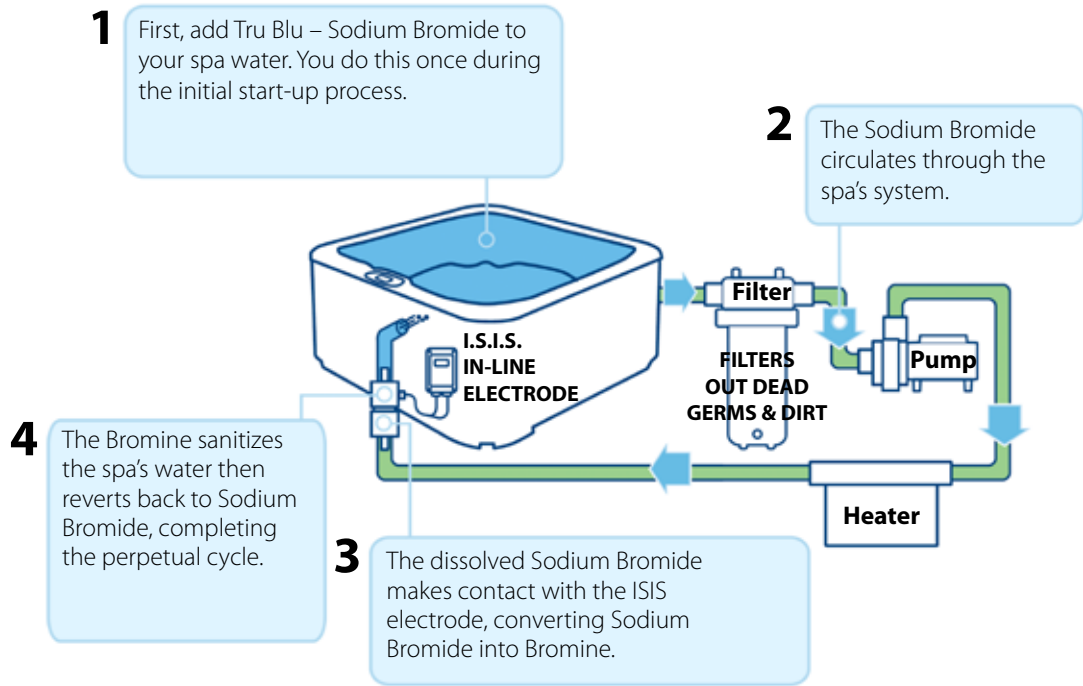

You can order I.S.I.S. for all WELLIS spas.

I.S.I.S. – INTELLIGENT SPA INTEGRATED SYSTEM An automatic water treatment system like no other

The I.S.I.S. water treatment system offers a smart, simple and economic solution that keeps your spa water safe, crystal clear and wonderfully pleasant for a whole year between water changes.

THE EASIEST WAY TO KEEP YOUR SPA CLEAN.

WELLIS UV-C water sanitization with PHILIPS lamp

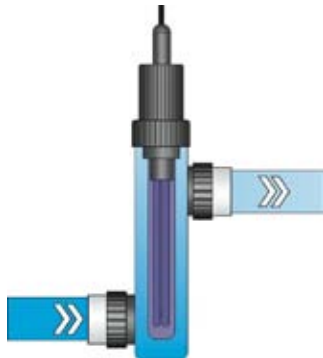

Developed in conjunction with PHILIPS, the WELLIS UV-C water sanitization with PHILIPS lamp brings the latest advances in UV-C water treatment technology to domestic Spas.

UV-C has long been a preferred system of sanitizing water in commercial swimming pools. This water treatment is hypo-allergenic and practicably 100% effective in destroying bacteria, viruses and water bourn contaminates.

Unfortunately the swimming pool equipment is large and heavy and impractical for use in domestic portable spas. Until now...

Our exclusive WELLIS UV-C water sanitization with PHILIPS lamp is light, compact and very powerful. Using just a tiny amount of power, it will silently, safely, and automatically treat the entire spa bathing water, many times each day, ensuring crystal clear, natural quality bathing water for you and your family, whilst minimizing the use of additional sanitizers.

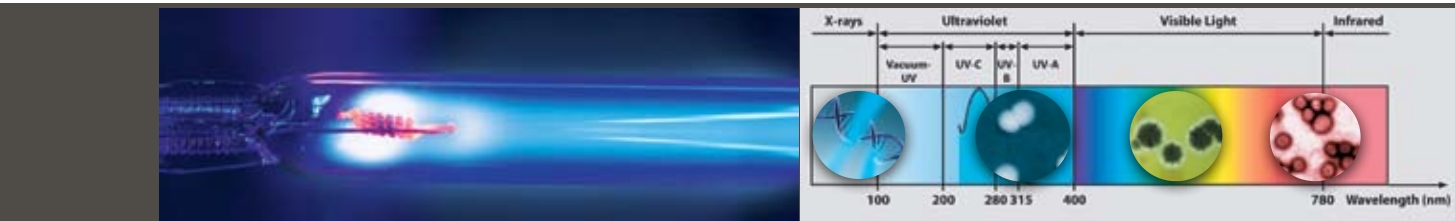

Advantages of the UV-C treatment:

- Ensures fresh, clean and clear water
- Disinfects water efficiently and safely
- Bound chlorine is broken down by UV-C light
- Protects your water from germs
- Can reduce the use of chorine and other chemicals by up to 80%
- Prevents the smell of chlorine and avoids irritation of the skin and eyes (red eyes)

Advantages of the WELLIS Spa UV-C:

- Up to 50% more UV-C yield
- Has a UV-C output of 3.6 Watt
- Has a Philips PLS module UV-C lamp
- Simple maintenance
- Standard 2-year WELLIS equipment guarantee

WELLIS UV-C water sanitization with PHILIPS lamp is available as an option on all WELLIS spa models except MANHATTAN Indoor™, Standard and Palermo Basic™, Standard™.

NEW!

PULSAR™ Massage System

PULSAR™ Massage System available for the following spa models. Choose one seat of the spa to upgrade with PULSAR™ system.*

EverRest

Robinson

Bahama

9 in 1

9 massage programs in 1 seat!

Enhances the spa experience!

The PULSAR™ Massage System consists of a controller that opens and closes valves that supply water to four groups of jets. When these jets are strategically located in a spa, they provide a sequencing massage therapy that enhances the spa experience and provides added value to a spa.

The top side control panel for the system allows the user to start or stop the massage, choose from 9 sequencing programs, select 1 of 3 sequencing speeds, and pause at any point in the current program.

Palermo Deluxe™

The Palermo Deluxe is a very highly specified medium sized hot tub. The two full length beds and seating provide accommodation for 5 adults. The intensity of the two powerful massage pumps can be easily adjusted by our progressive controls from a gentle caress to an intense hydro-massage.

Heated air jets also ensure the water temperature stays just where you like it, while our multi-point colour therapy mood lighting keeps you totally relaxed. Running costs won't stress you either thanks to our super efficient insulation and ultra low energy filtration and circulation technology.

Standard specification	
Shell material	PU reinforced acrylic (6,3 mm) only in Sterling Silver shell colour
Reclining places	2 persons
Sitting places	3 persons
Water volume	1315 l

O-flow™ Remote controller

You can enjoy a complete massage experience in all three seats of PALERMO Standard™ Spa. The PALERMO Standard™ stands out from the crowd with its two full length reclining beds and 38 powerful jets for full top to toe massage. The intensity is easily adjusted on three point of the spa by the air injector controls from a gentle caress to a powerful massage. So the strength of the hydromassage can be changed individually on the sitting and lying places of PALERMO Standard™ spa.

The 0.1 kW energy-efficient LAING circulation pump protects not only for your wallet, but the environment as well.

Standard

WELLIS SAMOA fits beautifully into a small space and through many doorways too!

It may be compact but our hydromassage system with intensity adjustment boosts the hydro massage to rival many two pump spas - only with lower running costs.

Multi-point mood lighting, a lounge bed, 4 additional seats, and internal molded steps make this spa a sure fire winner.

That tiny space over there - or perhaps the balcony - the terrace, or bathroom even WELLIS IBIZA will fit perfectly and provide a wonderful spa experience for up to 3 tired souls.

With our own hydromassage system, 28 hydro-massage and 8 air jets, Chromotherapy lighting, 3 headrests, a lounger, and two seats it's a small miracle we got it all in.

So that's the IBIZA then – a small miracle!

Manhattan Deluxe™

The Manhattan Deluxe™ is the most highly featured version of this superb compact spa. With 36 jets and two 2hp massage pumps it has great performance and aromatic infusion therapy, multi-point colour therapy lighting, and a heated air blower system provide a quality experience to rival many larger, more expensive hot tubs. In fact we believe this model has the best price/performance ratio of any similar sized spa.

We designed it to fit through a standard 75cm doorway and its compact size means even those with tiny gardens can now enjoy big spa benefits from our great little Manhattan spa.

ManhattanStandard™

The MANHATTAN Standard™ spa was made from antibacterial, outdoor, UV resistant acrylic, which has been included 30 mm thermal insulating layer, so you can place indoor and outdoor as well.

We designed the WELLIS MANHATTAN Standard™ spa to fit through a standard doorway (75cm), enabling it to be installed both indoors as well as on a terrace or in a small garden. But even so, the seats are full depth and the performance is every bit as amazing as you would expect from a Wellis Spa.

The MANHATTAN Standard™ spa is a lifelong gift for body and soul, providing re-creation and health!

MANHATTAN Standard™ – with thicker insulation and exterior grade UV resistant shell for the more demanding outside installations.

ManhattanIndoor™

Now you can experience the pleasures of a spa in your bathroom!

The primary consideration - throught the creation of MANHATTAN Indoor™ spa - was the affordability and the sustainability. This has been achieved by Wellis professionals without compromises, new developments and raw material consumption.

We designed the Wellis MANHATTAN Indoor™ spa to fit through a standard doorway (75 cm). The two-speed 3 HP hydromassage pump gives the intensive enjoyment for both lying and seiting position beside low consumption.

The innovative design of the MANHATTAN Indoor™ ensures it is very affordable.

MANHATTAN Indoor™ the same strength and features as MANHATTAN Standard™ but made from more affordable materials suitable for indoor installations.

Accessories

At WELLIS, we are constantly seeking to give our customers real value for money and aim to offer the best possible hydrotherapy experience. Choose from our range of additional options to create your own unique garden spa experience.

Wipod Multimedia Player

The WELLIS SpaSound audio system is a true marine-grade system that will surround you in 3D sound that has to be experienced!

The system comprises:

Multimedia player MP3-TUNER with bluetooth connection
Gas damped rising shell speakers
Integrated Sub Bass system

Exclusive multipoint lighting

The exclusive WELLIS on-demand colour therapy moodlighting, includes between 12 and 20 water line led point lights within the bathing area.

Spa step

Easy access in and out of your spa is guaranteed with our convenient spa steps.

Available in colours to match our cabinet colours.

NEW Spa App

for the **iPhone®**, **iPod touch®** or **iPad®**.

Take control of your spa remotely!

Sit back and enjoy the all new Spa Application for your iPhone®, iPod touch® or iPad®. Take control of your spa anywhere at anytime. Set the temperature, heat mode, lights and pumps all with a single touch.

WELLIS Wireless 17" LCD TV

The WELLIS optional LCD TV adds another level of enjoyment to your hot tub.

This system adapter box can receive Terrestrial TV and has connections for CD/DVD/BLUE-RAY players.

The adapter can be placed anywhere in the house, and wirelessly transmits a perfect sound/audio signal using the digital 5G system to the 17" water resistant LCD screen.

Features:

17" LCD TV • 16:9 - 1440x900 pixel • NTSC/PAL system • built in speakers
• water resistant remote control

Thermo cover and cover lifter

Our high quality Thermo covers are an important feature of your spa, designed to keep the heat in and your energy costs down.

Available in two colours to compliment our choice of cabinet shades.

We also offer a range of cover lifters that make removing and replacing your cover so easy – also helps to protect it from damage.

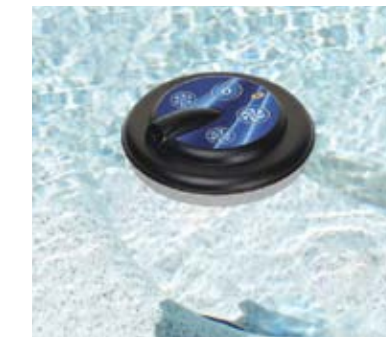

Xtreme™ winter cover

The Xtreme™ cover adds insulation value to the spa in a region of extreme snow and cold. Xtreme™ covers add approximately 5 cm of insulation above the standard cover. Relax, knowing the spa is safe and the heat is insulated, even in severe weather conditions.

WELLIS Spa Bag

The WELLIS insulated Spa Bag provides protection from the weather, so keeping your Wellis spa in great condition between uses, particularly when away on holidays etc. The Spa Bag is also insulated to help reduce electricity costs even further during the colder winter months.

O-flow™ remote control

The O-flow™ remote is a waterproof, universal control; it floats on water, has an ergonomic grip & tactile buttons

We can make spa thermo covers for any shape, or any size, in different colours.

Please contact us for more informations.

Additional heater (4kW)

An extra heater is available for colder winter climates.

This effectively doubles the heaters capacity to maintain high water bathing water temperatures in exceptionally cold environments.

Please ask your dealers advice.

Aromatic therapy

Enjoy the relaxing effects of aromatic infusions in your WELLIS spa, adding the power of your favorite fragrances to your hydrotherapy experience - which is sure to result in a better mood!
